

System Architecture

Architecture Components

1. Presentation Layer

This layer provides the user interface for interacting with the application.

Components

- Employee Onboarding Record Producer
- Employee Exit Record Producer

- Employee Forms
- Service Catalog
- List Views

Purpose

Allows HR users and employees to submit onboarding and offboarding requests without directly accessing database tables.

2. Business Logic Layer

This layer contains all automation and server-side processing.

Business Rules

Auto Generate Employee ID

- Executes before insert
- Automatically generates a unique Employee ID.

Example:

EMP1782646357091

Set Default Employee Status

- Executes before insert
- Automatically sets

Status = Onboarding

if no status is selected.

Flow Designer

Employee Onboarding Flow

Trigger

Onboarding Request Created

Actions

- Update Request Status
- Create HR Approval
- Create Asset Task
- Create Asset Allocation
- Send Welcome Email

Employee Offboarding Flow

Trigger

Offboarding Request Created

Actions

- Update Request
- Create HR Approval
- Create Asset Return Task
- Update Employee Status
- Send Exit Notification

3. Notification Layer

Two email notifications are configured.

Welcome to ABC Company

Triggered after successful onboarding.

Purpose: Welcomes the employee.

Exit Process Completed

Triggered after successful offboarding.

Purpose: Confirms completion of employee exit process.

4. Data Layer

The application stores information in custom ServiceNow tables.

Employee

Stores employee master information.

Fields include

- Employee ID
- Name
- Email
- Department
- Designation
- Manager
- Status

Onboarding Request

Stores onboarding requests.

Fields

- Employee
- Department
- Joining Date
- Approval Status
- Status

Offboarding Request

Stores exit requests.

Fields

- Employee
- Last Working Day
- Reason
- Status

HR Approval

Stores approval records.

Fields

- Employee
- Approver
- Approval Status

Asset Allocation

Stores IT asset assignment details.

Fields

- Employee
- Asset Type
- Asset Tag
- Allocation Date
- Status

5. Reporting Layer

The application provides six reports.

- Employee Status Report
- Department Wise Employees

- Onboarding Requests
- Offboarding Requests
- HR Approval Status
- Asset Allocation Status

These reports help administrators monitor employee lifecycle activities in real time.

6. Security Layer

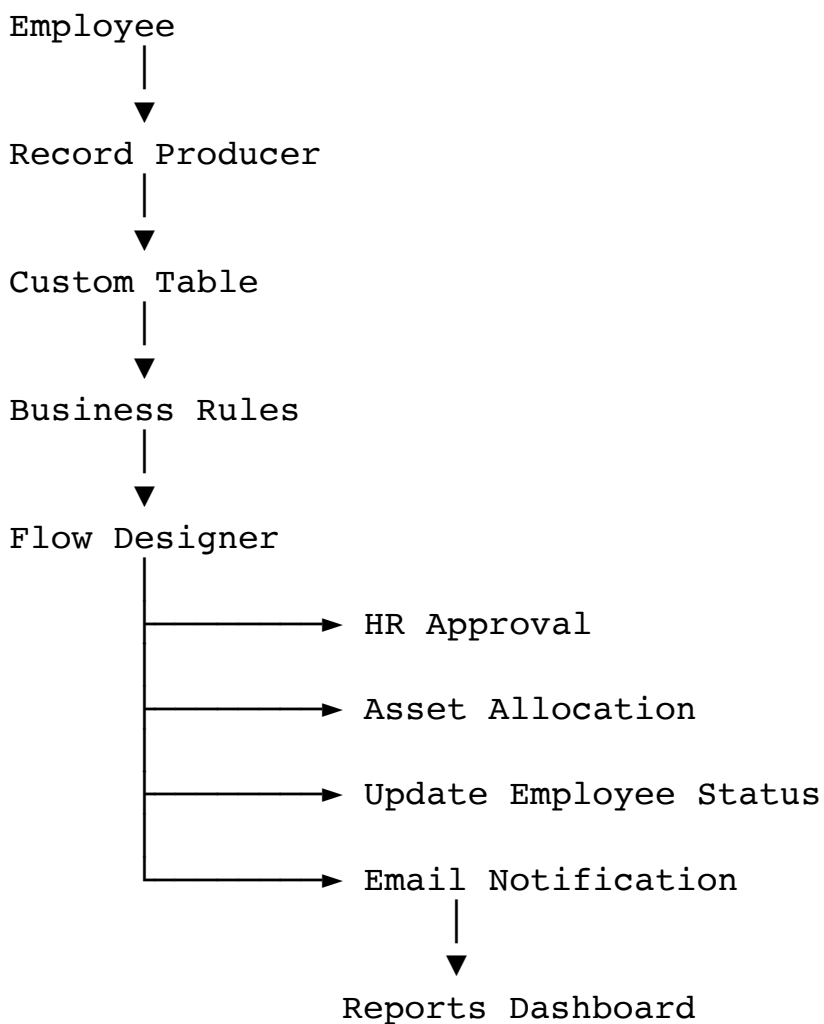

The application uses ServiceNow role-based access control.

Roles include

- Administrator
- HR Team
- IT Asset Team
- Employee

Only authorized users can create, approve, update, or manage employee lifecycle records.

System Workflow

Technologies Used

Component	Technology
Platform	ServiceNow Zurich
Workflow Automation	Flow Designer
Server-side Logic	Business Rules
Forms	Record Producers
Database	ServiceNow Custom Tables
Notifications	Email Notifications
Reporting	ServiceNow Reports
Security	Roles & ACLs
