

Business Rules

Business Rule 1: Auto Generate Employee ID

Purpose: Automatically generates a unique Employee ID whenever a new employee record is created.

Table:

Employee

When to Run

Before Insert

Trigger

New Employee Record

Logic:

If Employee ID is empty

↓

Generate

EMP + Current Timestamp

↓

Store Employee ID

Example:

EMP1782646357091

Output: Unique Employee ID generated automatically.

Benefits

- Eliminates duplicate IDs
- No manual entry
- Faster record creation

Business Rule 2: Set Default Employee Status

Purpose: Automatically sets employee status to Onboarding when a new employee is created.

Table:

Employee

When to Run

Before Insert

Trigger

Employee Record Creation

Logic:

```
If Status is Empty
↓
Status = Onboarding
```

Output: Employee Status

Onboarding

Benefits

- Standardized employee records
- No missing status
- Supports Flow Designer automation

Summary

Business Rule	Purpose
Auto Generate Employee ID	Generates unique Employee IDs
Set Default Employee Status	Sets default status to Onboarding
